

Two math problems are shown on a grey background. The first problem is $2 + 3 = \underline{\quad}$ and the second is $5 - 3 = \underline{\quad}$. Each problem is accompanied by a number bond diagram. The number bond for $2 + 3 = 5$ shows a large circle containing the number 5, with two smaller circles below it containing the numbers 2 and 3. The number bond for $5 - 3 = 2$ shows a large circle containing the number 5, with two smaller circles below it containing the numbers 2 and 3. Arrows indicate the relationship between the parts and the whole.
